EDUCATION

Minnesota State University, Mankato — B.S. Computer Science (Honors) *Mankato, MN | Expected May 2028*

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Software Engineering, Database Systems, Machine Learning

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL, HTML5, CSS3

Frameworks & Tools: React.js, Node.js, Express.js, Next.js, Docker, Git, AWS (EC2), CI/CD, Firebase, MongoDB, MySQL, Postman, Linux

Methodologies: Agile/Scrum, OOP, RESTful API Design, Unit Testing, Code Review, System Design, ETL Pipelines, SDLC

WORK EXPERIENCE

Software Engineering & IT Systems Assistant | Minnesota State University, Mankato *Oct 2025 – Present*

- Managed and monitored live production systems supporting 5,000+ concurrent users, ensuring high availability and system reliability.
- Reduced system setup time by 25% through workflow automation, scripting optimizations, and configuration standardization.
- Diagnosed and resolved real-time system failures across 20+ large-scale deployments using root-cause analysis and debugging techniques.
- Collaborated cross-functionally with engineering teams to test, validate, and deploy system configurations following SDLC best practices.

Undergraduate Researcher — Machine Learning & Sensor Data | Minnesota State University, Mankato*Aug 2024 – Present*

- Designed and implemented ETL pipelines in Python to ingest and process 50,000+ sensor records for ML model training and evaluation.
- Optimized ML inference pipelines using modular OOP Python code, reducing inference latency by 40% across production model runs.
- Applied supervised learning algorithms (SVM, Random Forest, LightGBM) to predict soil fertility and crop yield; published peer-reviewed research.
- Presented technical findings at the National Conference on Undergraduate Research (NCUR 2025); collaborated via Git with Agile team practices.

Full-Stack Software Developer | Gauravgo Games Technologies — Remote, India *Jan 2023 – Feb 2023*

- Designed and developed RESTful APIs using Node.js, Express.js, and MongoDB to integrate account and HR management systems.
- Containerized microservices with Docker and deployed to production via CI/CD pipelines; documented and tested all endpoints using Postman.

Student Operations Supervisor | Sodexo, Mankato, MN *Sep 2024 – Present*

- Led teams of 10–25 staff serving 2,000+ daily customers; designed onboarding workflows for 20+ new hires, reducing training time by 20%.

PROJECTS

Student Guidance Platform | *Node.js, PHP, MySQL, AWS EC2, REST APIs, JWT Auth*

- Built a full-stack admissions guidance platform scaled to 55,000+ registered users with RESTful APIs, optimized MySQL schemas, and AWS EC2 deployment.
- Implemented JWT-based authentication for secure role-based content access; designed for high-traffic concurrent usage with scalable architecture.

Lost on the Moon | *Unity, C#, 3D Physics, OOP*

- Designed modular game architecture in C# using OOP principles; profiled and optimized physics and rendering pipelines, reducing frame drops by 30%.
- Collaborated using Git version control workflows, enforcing clean code standards and agile development practices across the project lifecycle.

EXTRACURRICULAR & LEADERSHIP

AI/ML Research – Agriculture Optimization: Published peer-reviewed research applying SVM, Random Forest, and LightGBM tree-based models to predict soil fertility and improve agricultural crop yield outcomes.

Judge – VEX V5 Robotics Competition: Served as a technical judge evaluating robotics hardware design, programming logic, autonomous routines, and team engineering presentations at a regional competition.
